

Note concerning the Metadata for the Armagh Meteorological Archive

A catalogue of the items contained in Archive is given, in order of the catalogue number, in the file: metadata-04March2020-ordno

Many of the earlier items were scanned by Erin Park in 2004. The scans are contained on a DVD and a digital copy of individual items may be requested from the librarian at Armagh Observatory.

The entire directory amounts to approximately 2.4 Gbytes. Items from later in the 20th century, including the work done in the 1990s and in the early 21st century have not been scanned and so are only available in the original documents stored at Armagh Observatory.
