Meteorological Data recorded at Armagh Observatory from 1795 to 2004: Volume 10 - Daily, Monthly, Seasonal and Annual Hours of Bright Sunshine 1880-2004

C.J. Butler, M. Emerson, A.M. García-Suárez, E. Pallé and S.T. Kelly

Armagh Observatory, College Hill, Armagh BT61 9DG, N. Ireland

Introduction

A daily record of sunshine hours at Armagh Observatory, using a standard Campbell-Stokes sunshine recorder, commenced on 21 April 1880. From that date until October 1885 there are several gaps in the data but, subsequently, the records are regular and consistent. Here we tabulate the daily, monthly and annual total sunshine hours recorded at Armagh up until the end of 2004.

The Campbell-Stokes Sunshine Recorder

The original design of the bright sunshine recorder used a water filled glass sphere to focus the rays of the Sun onto a paper strip where a burnt trace was produced. A later version, which subsequently became standard, employs a solid glass sphere (see Met. Office Observers Handbook, 1982). The sustained use of the Campbell-Stokes recorder for over a century probably owes more to the desirability of continuity than its ability to record a scientifically well defined parameter. Even when well adjusted and maintained, it tends to over-record periods of intermittent bright sunshine and to under-record periods of hazy sunshine or weak sunshine when the Sun is at low altitude. In addition, the measurement of bright sunshine using the Campbell-Stokes recorder is susceptible to error from a number of other sources such as : (i) a non-uniform horizon due to the proximity of topographic features or vegetation such as trees, (ii) changes in the altitude and orientation of the recorder, and finally (iii) changes in the sensitivity of the recording card due to variable humidity and variations in manufacture. In spite of these disadvantages, the Campbell-Stokes recorder continues to be used, not least because of the valuable information it can give us on long term trends in cloud cover. In Plates 1 and 2, we show the current (2005) version of the Campbell-Stokes Sunshine Recorder at Armagh Observatory.

The location and height of the Sunshine Recorder

In Table 1a, we have listed the items in the Observatory Archives that refer to the Sunshine Recorder or its environment. The sunshine recorder has been moved three times since its first installation in 1880. Initially, the recorder was placed upon a platform approximately 3.9m above the flat, central, valley in the roof of the main Observatory Building and about 11m above ground level (see plates 3 and 4, and figure 1). On account of concern over the growth of some large trees nearby, it was resited in April 1927 to a free standing tower 4.88m (16 feet) high, placed in the Observatory grounds, between the Robinson and Calver Domes (see plates 5 and 6), at location B on figure 1 . In 1952/3, the recorder was again moved for similar reasons to a new 6.4m (21 feet) tower (see plates 7 and 8) located about 36m south of the former site (site C, figure 1). Finally, in May 2001 the recorder was moved to a new and higher (8.4m) tower nearby (plate 8 and site D, figure 1) where it remains to this day (September 2005). Details of the location and height of the recorders used and the dates at those locations are given in Table 1(a) and figure 1.

The horizon profiles

From time to time, horizon profiles have been sketched by either the Meteorological Office Inspector or by Observatory staff. In figure 2 we show those profiles which we have found in the Observatory or NI Met Office Archives. Photographic surveys made in 1998 and 2005 are shown in plate 9. Here, we show the horizon profile in August 2005 together with an approximate delineation of the 3-degree altitude line and indications of the limiting azimuths of the Sun at the Winter Solstice (WS) and Summer Solstice (SS) when at an altitude of 3 degrees. In early spring 2006, additional pruning of trees was undertaken to ensure that there is no obscuration of the Sun above this critical altitude.

Overlap readings from the new and old position in 2001

The 8.4m tower was erected in 2000, however health and safety considerations prevented its use until the installation of an electromechanical system in early 2001. Records from the new tower began on 15 March 2001 and for a short period parallel readings were made from the old 6.4m tower. These were discontinued on 18 May 2001. Over the period 15 March to 18 May, data for five days on one or other tower (but not both) were lost due to instrument malfunction. For the remaining 59 days, the total sunshine hours recorded from the old (6.4m) tower was 277.5 hours and from the new (8.4m) tower, 279.3 hours. Thus the accumulated hours of bright sunshine at the new location and height was only 1.8 hours above that recorded at the old location and height, a difference of 0.6%. This difference would be expected to be seasonally variable.

The sunshine data from Armagh Observatory

The procedure for measurement of the period of bright sunshine is given in the Meteorological Office Observers Handbook (1982). The data which are compiled here have been extracted from the manuscript daily record books (M117.2) kept in the Observatory Archives (Butler and Hoskin, 1987). In Table 2, we give the daily sunshine hours from 1880 to 2004 at Armagh and in Table 3, the total monthly and annual sunshine hours. On account of the incompleteness of our knowledge of the various changes that have occurred in the environment of the site, we have not attempted any correction to the raw data given here. Thus the usefulness of this data rests on the fact that the measurements have been made in a consistent way from a single site for a period of over 120 years. Note that, in some months prior to 1886, there are a significant number of days without coverage.

Figure 3, shows the mean daily sunshine hours, the total possible sunshine hours and the sunshine factor (the top curve divided by the middle curve), throughout the year, for the period 1951-1995. We note the prevalence of clearer skies before the summer solstice, compared to later. The double-humped nature of the sunshine factor curve is probably due to the pronounced shift in the atmospheric circulation pattern that occurs in the vicinity of the British Isles in mid-June and which gives rise to an increasing dominance of westerly air-flows and a fall in the sunshine factor in July and August.

A comprehensive study of the sunshine data from Armagh Observatory and three other sites in Ireland, namely Dublin, Birr and Valentia/Cahirceveen has been published by Palle and Butler (2001) in which the long-term trends of sunshine in Ireland have been discussed in the context of their relevance to changes in cloud cover. In general, it is found that the annual total of bright sunshine hours has decreased at all four Irish sites since records began in 1880 with the decrease most conspicuous at the most westerly site of Valentia. The agreement in the trends at different sites confirms that they are probably real and not due to local environmental changes such as increased growth of trees on the horizon. Additional evidence supporting the value of the sunshine data comes from a comparison with satellite cloud cover measurements from the International Satellite Cloud Climatology Project (ISCCP). Palle and Butler (2001) showed how, over the period for which the satellite data was available (1983-94), there was a strong correspondence between the total annual sunshine hours and the cloud cover over Ireland, particularly during the sunnier spring and summer months. Thus it is reasonable to expect that the total hours of bright sunshine tabulated here can be used as a proxy for cloud cover over Northern Ireland since the late 19th century.

Table 1 Notes concerning the Sunshine Recorder

(a) Location and Height of the Sunshine Recorder 1880-2005

Dates	Location	Aprox. Height (m)	Reference
21/04/1880 - 24/04/1927	Obs. Roof A	11.0	ARM/MET/000126
24/04/1927 - 31/12/1952	B	4.9 (16ft)	ARM/MET/000149
01/01/1953 - 17/05/2001	C	6.4 (21ft)	
18/05/2001 - 2005	D	8.4	ARM/MET/000241

(b) Remarks from Inspectors Reports and other documents in the Archives

Document Code	Year	Remarks
ARM/MET/000179	1906	Lens very slightly tinged yellow
ARM/MET/000181	1907	Colour of lens pale yellow
ARM/MET/000183	1908	Slightly straw colour. The location is good, excepting some trees to the NW might interfere with late sun at the summer solstice.
ARM/MET/000189	1910	The noon marks are faint
ARM/MET/000193	1912	Satisfactory, with the exception that the Noon marks are very indistinct.
ARM/MET/000195	1913	Trees on W and NW are about 12 degrees above the recorder.
ARM/MET/000197	1914	The trees have not been cut and rise to an altitude of about 10 degrees to the WNW. Landowner difficult to contact to get trees cut.
ARM/MET/000198	1917	Mr Faris was underestimating the sunshine at the present time. Corrected. The exposure is not good owing to the trees in the E and W, apart from the trees it would be good. Its position is about the best that can be found under the circumstances.
ARM/MET/000041	1928	Proposed changes to sunshine recorder
ARM/MET/000055	1938	Trees to NW cut off sunshine 18.30 GMT onwards
ARM/MET/000090	1945	Exposure of the recorder is very poor, more than 5% of the sunshine being obstructed in May, June, July and August, over 4% in April and over 3% in December. Possibility of moving recorder.
ARM/MET/000092	1946	Possibility of moving recorder
ARM/MET/000093	1946	Possibility of moving recorder
ARM/MET/000094	1946	The sunshine recorder is erected on an iron trellis tower about 16 feet high, situated some 50 yards from the Observatory and near the instrument enclosure. The exposure is affected in summer by trees from about W to NW and slightly affected in mid-winter by two trees almost due south. It is recommended that the recorder be moved approximately 20 yards southeastwards and raised ten feet. It would then be free of obstruction.
ARM/MET/000100	1946	Plans to move sunshine recorder in November
ARM/MET/000110	1947	Exposure free except direction 280 to 320 degrees. See diagram.
ARM/MET/000111	1947	New site for recorder considered.Exposure free except direction 280 to 320 degrees. See diagram.
ARM/MET/000116	1947	Summary of corrections 1914-1947
ARM/MET/000121	1949	Need to move sunshine recorder, requesting funding to do so
ARM/MET/000122	1949	Need further information on new site for sunshine recorder and costs of moving

Document Code	Year	Remarks
ARM/MET/000123	1950	Cost of new sunshine recorder site estimated at £54 "The present recorder is 14 feet above the ground and we propose to extend it to 20 feet above the ground. I enclose an exposure digram as for ground level. As you will see there are five trees which would cause extinction. If the Meteorological Office are willing to pay the above sum we are prepared to remove these trees. We could not remove the trees at azimuth 320 degrees. There is a grove there which provides shelter for the Observatory."
ARM/MET/000127	1950	Need to get estimated cost of new sunshine site.
ARM/MET/000128	1950	£65 estimate seemed reasonable
ARM/MET/000129	1950	Due to a supply of steel in stock, possible to erect the steel tower for £25. New sunshine tower to be erected immediately. Certain trees to be removed as agreed.
ARM/MET/000131	1950	Approval given for erection of 20 foot steel tower for a sunshine recorder for £.
ARM/MET/000132	1950	Request for exposure diagram for new site
ARM/MET/000133	1950	Delay in work due to contractor being too busy
ARM/MET/000783	1950	Results of examination of sunshine cards and tower, etc
ARM/MET/000126	1951	Need to move recording site cost now £66
ARM/MET/000134	1951	The adjustment on the recorder still faulty
ARM/MET/000135	1951	New structure for sunshine recorder considered unsafe and a danger to staff using it
ARM/MET/000136	1951	Improvement. We shall probably start to use our new sunshine recorder as soon as we have not got our old one adjusted correctly.
ARM/MET/000137	1951	Danger of new structure over emphasised but will be reinspected
ARM/MET/000138	1951	Structure needs further support
ARM/MET/000139	1952	Guy wires must be kept properly tensed on new structure
ARM/MET/000140	1952	The Cards sent to the MO show the adjustment is faulty. The line slopes upwards at sunset. Condition of instrument described as poor. Metal base badly corroded and out of level. Temporarily levelled pending installation of new site. Tree to W will be topped to avoid any obstruction.
ARM/MET/000141	1952	Adjustment out of level owing to corrosion and buckling of metal base. Exposure satisfactory. Recorder being resited. Reiteration of problems with existing recorder and work need to be done on new tower also removal of tree.
ARM/MET/000144	1952	Sunshine tower now properly anchored but trees not cut down as requested.
ARM/MET/000145	1952	Request that trees be cut as agreed.
ARM/MET/000147	1952	Trees to be removed in October and November
ARM/MET/000151	1952	Trees to be removed in November
ARM/MET/000843	1953	Form 898: result of examination of sunshine cards
ARM/MET/000153	1955	Percentage obstruction May 1%, June 1.3%, July 1.1%, Aug 0.2%, rest of months no obstruction

Document Code	Year	Remarks
ARM/MET/000157	1957	The tree to the eastwards should be cut down. I doubt very much whether the Director would agree to any topping of the trees to NW. Exposure could be improved by loping off trees at 80, 105-115 and 310-320 degrees, also spire at 270 degrees.
ARM/MET/000158	1957	Need a new sunshine sphere as current one has become amber in colour. Will be provided as soon as possible.
ARM/MET/000160	1958	Arrangements made to remove the tree to the east which affects the sunshine in the summer.
ARM/MET/000161	1958	No significant obstruction on sunshine diagram
ARM/MAT/000550	1960	The measurement of sunshine cards
ARM/MET/000300	1962	Corrections for month of July
ARM/MET/000303	1963	Corrections for month of August. The unusual width of the burns was thought to be due to the sphere being out of focus, but the 1963 Inspection did not confirm this. However, the structure upon which the recorded is placed is not very firm, and this might be the cause of the wider trace (vibration etc in the wind). The structure is to be reviewed by P.B.W. and the matter will be reviewed again when work has been completed.
